

# ACUPUNCTURE

Acupuncture is a traditional medicine that has been used on horses as far back as 3000 years ago. Using the meridians & points you work with the body's natural energy to regain balance. Small needles and moxa are used in order to stimulate or sedate the Qi (Chee) energy.

Acupuncture works by clearing the blockages with the needles allowing the flow to be re-established

There are over 360 points in the body that can be used however most of the time we only use approx 40 and in various combinations

What can acupuncture help with:  
Pain in a variety of areas  
Behavioral issues  
Injuries and healing  
Scars  
Fertility  
and many many more

You can combine both acupuncture and massage in the one treatment. It all depends on what is happening with your horse as to the best way to go!
