

# EQUINE IRIDOLOGY

Eyes are often described as window to the soul, this is true but it is also a window to your health.

This has been a long practice of looking at the map of the eye to show what is happening physically and emotionally.

At conception and development our eyes are at first part of the brain and then separate hence the strong connection.

You can detect a hereditary condition from the age of 6 weeks old.

Often the issues appear in the eye prior to the physical / emotional symptoms show themselves to modern medicine and therefore precaution can be put in place.

It can even show you old issues that may of resolved themselves.

It can also be done with a simple photo of the eye and then an consultation over the phone or by zoom.
